Mr. E.A. Altemos
HMT Associates, L.L.C.
1850 K Street, NW
Washington, DC 20006

Dear Mr. Altemos:

Enclosed is the 6th revision of DOT-E.9791, which incorporates the emergency modification you requested on behalf of the Pressed Steel Tank Company, Inc. Please note paragraph 8.C of the exemption, which requires that prior to the first shipment of any specific design, a report of prototype test results specified in § 178.37(d)(3) of the exemption must be submitted to this office. In addition, a copy of the inspector's report for the first three lots produced must also be submitted to this office as soon as practicable. Let us know if you have any questions concerning these requirements.

Sincerely,

R. Ryan Posten
Exemptions Program Officer
Office of Hazardous Materials
Exemptions and Approvals

Special Programs
Administration**

AUG 16 2000

400 Seventh Street, S.W.
Washington, D.C. 20590

DOT-E 9791
(SIXTH REVISION)

EXPIRATION DATE: April 30, 2002

(FOR RENEWAL, SEE 49 CFR § 107.109)

1. GRANTEE: Pressed Steel Tank Co.
Milwaukee, Wisconsin
2. PURPOSE AND LIMITATION:
 - a. This exemption authorizes the use of a non-DOT specification cylinder conforming in part with the DOT-3AA specification, for use in the transportation of certain non-flammable, non-liquefied compressed gases transportation in commerce. This exemption provides no relief from the Hazardous Materials Regulations (HMR) other than as specifically stated herein.
 - b. The safety analyses performed in development of this exemption only considered the hazards and risks associated with transportation in commerce.
3. REGULATORY SYSTEM AFFECTED: 49 CFR Parts 106, 107 and 171-180.
4. REGULATIONS FROM WHICH EXEMPTED: 49 CFR §§ 173.34(a)(1), 173.301(h) and 173.302(a) in that non-DOT specification cylinders are not authorized except as prescribed herein.
5. BASIS: This exemption is based on the application of Pressed Steel Tank Company dated March 15, 2000, submitted in accordance with § 107.109, and a supplemental letter dated August 10, 2000.

AUG 16 2000

Continuation of DOT-E 9791 (6th Rev.)

Page 2

6. HAZARDOUS MATERIALS (49 CFR § 172.101):

Proper Shipping Name/ Hazardous Materials Description	Hazard Class/ Division	Identi- fication Number	Packing Group
Non-flammable, non-liquefied gases authorized for DOT-3AA	2.2	as appro- priate	n/a

7. SAFETY CONTROL MEASURES:

a. PACKAGING - Packaging prescribed is a high strength, non-DOT specification steel cylinder, conforming with PST's drawing 1280201-4 dated February 1987 on file with the Office of Hazardous Materials Exemptions and Approvals (OHMEA), and DOT specification 3AA (§§ 178.35 and 178.37), except as follows:

§ 178.35(c) *Duties of Inspector.*

* * *

(Add) (5) Verify that the design qualification tests prescribed in § 178.37(d) (3) have been performed with satisfactory results:

(Add) (6) Lot definition. In this exemption, a "lot" means a group of cylinders successively produced and having the same:

- (i) Size and configuration;
- (ii) Specified material of construction;
- (iii) Process of manufacture and heat treatment;
- (iv) Equipment of manufacture and heat treatment;
- (v) Conditions of time, temperature and atmosphere during heat treatment.

AUG 16 2000

Continuation of DOT-E 9791 (6th Rev.)

Page 3

In no case may the lot size exceed 200 cylinders, but any cylinder processed for use in the required destructive testing need not be counted as being one of the 200.

§ 178.35(e) *Pressure relief devices and protection for valves and pressure relief devices.*

(Add) Pressure relief devices must be in compliance with § 173.302 (c) (1).

§ 178.35(f) *Marking.*

Applies except that "DOT-E 9791 3500" must replace "DOT 3AA 3500". Test pressure "TP 5250" must be marked following or near the service pressure. The letters "TP" preceding the test pressure is optional.

§ 178.35(g) *Inspector's report.*

The inspector's report must be revised to accommodate the above changes in requirements.

§ 178.37(a) *Type, size and service pressure.*

(1) Seamless cylinder with 6.875 inches nominal inside diameter, 0.179 inch minimum wall thickness, 50 pounds maximum water capacity, and a 3,500 psig service pressure.

(2) Does not apply.

§ 178.37(b) *Authorized steel.*

Electric furnace or equivalent steel of uniform quality is authorized. The steel analysis must conform with the following:

AUG 16 2000

Continuation of DOT-E 9791 (6th Rev.)

Page 4

CHEMICAL COMPOSITION IN WEIGHT PERCENT

<u>Element</u>	<u>Ladle Analysis</u>		<u>Check Analysis Tolerance</u>	
	<u>Gr. 1</u>	<u>Gr. 2</u>	<u>Under</u>	<u>Over</u>
Carbon	0.31/0.35	0.28/0.33	0.01	0.02
Manganese	0.60/0.90	0.70/0.90	0.03	0.03
Phosphorus	0.025 max.	0.015 max.	-	0.01
Sulfur	0.010 max.	0.010 max.	-	0.01
Silicon	0.15/0.35	0.15/0.35	0.02	0.03
Chromium	0.80/1.10	0.80/1.10	0.03	0.03
Molybdenum	0.15/0.25	0.15/0.25	0.01	0.01
Vanadium	0.07/0.10	0.02 max.	0.01	0.01
Aluminum	0.01/0.05	0.02/0.06	-	0.00
Copper	0.20 max.	0.20	-	0.00
Sulphur plus phosphorus	-	.020 max	-	-

Note 1: Steel shall be treated with calcium to provide the following J-K microcleanliness rating per ASTM Standard E-45, Method D for Gr. 1 and Method A for Gr.2.

<u>A (Sulfides)</u>		<u>B (Alumina)</u>		<u>C (Silicates)</u>		<u>D (Oxides)</u>	
<u>Thin</u>	<u>Heavy</u>	<u>Thin</u>	<u>Heavy</u>	<u>Thin</u>	<u>Heavy</u>	<u>Thin</u>	<u>Heavy</u>
2.0	2.0	2.0	2.0	2.0	2.0	2.0	2.0

Certificate from the material manufacturer must certify that the material was calcium treated and must include in such certification the J-K microcleanliness rating for each heat of steel.

Note 2: Steel shall be aluminum killed and made by a fine grained de-oxidation practice.

§ 178.37(c) *Identification of material.*

Materials must be identified by any suitable method. Steel stamping of heat identification must not be made in any area that will eventually become the sidewall of the cylinder. Depth of stamping shall not encroach upon the minimum prescribed wall thickness of the cylinder.

AUG 16 2000

§ 178.37(d) *Manufacture.*

- (1) Cylinder shells must be of seamless construction manufactured by the deep drawing method with integrally formed heads and bottoms; dirt and scale to be removed as necessary to afford proper inspection; no fissure or other defect acceptable that is likely to weaken the finished cylinder appreciably. The general surface finish shall not exceed a roughness of 250 r.m.s. individual irregularities such as draw marks, scratches, pits, etc. should be held to a minimum. If the cylinder is not originally free of such defects or does not meet the finish requirements, the surface may be machined or otherwise treated to eliminate these defects. Metal removal for any purpose other than removal of isolated defects and threading must be done prior to the hydrostatic test. The thickness of the treated areas must be measured and must not be less than the minimum prescribed thickness. Cylinder end contour must be hemispherical or ellipsoidal (axis ratio of 2:1) with concave side to pressure.
- (2) Shape and thickness of the cylinder bottom and sidewall adjacent to the bottom must be such that failure during the cycle pressure test occurs in the sidewall of the cylinder. The thickness of the cylinder bottom must be no less than the cylinder sidewall thickness.
- (3) Design qualifications: The design authorized herein and any significant change to this design must be qualified for production by performing the test specified below:
 - (i) Burst Test. Three cylinders must be hydrostatically burst without evidence of fragmentation. The rate of pressurization must not exceed 200 psi per second. Cylinders subjected to the burst test must withstand a pressure of at least 2.25 times the service pressure without failure. Failure must initiate in the sidewall in a longitudinal direction, and the cylinder must remain in one piece.

(ii) Flattening Test. Three cylinders must be flattened to eight times the wall thickness without cracking.

(iii) Cycle Test. Three cylinders must be cycle tested to destruction to an upper cyclic pressure of 1.5 times service pressure. The successive hydrostatic pressurizations from the lower cyclic pressure to the upper cyclic pressure must not exceed a rate of ten cycles per minute. Adequate recording instrumentation must be provided if equipment is to be left unattended for any period of time. Lower cyclic pressure must not exceed 10 percent of the upper cyclic pressure. Cylinders must withstand at least 10,000 cyclic pressurizations without distortion or failure. The failure must occur in the sidewall and the failure mode must be leak before burst (LBB). At least one cylinder must be cycled using water as the pressurizing medium.

(iv) Flawed Burst Test. One cylinder must be cycle tested to destruction at a pressure of 1.25 times the service pressure. This test must be performed after three flaws (slots) are machined into the upper sidewall of the cylinder. The flaws must have a minimum length of 6t and be located at 120° intervals. The flaws must be introduced into the cylinder by a means that will not affect the mechanical or metallurgical properties of the cylinder. The failure mode must be LBB. Examination of the failed cylinder must show evidence of fatigue crack propagation prior to leakage.

In this exemption, "significant change" means a 10 percent or greater change in cylinder wall thickness, service pressure, or diameter; a 30 percent or greater change in water capacity of base thickness; **any change in material**; over a 100 percent increase in size of openings; or any change in the number openings.

§ 178.37(e) *Welding or brazing.*

Welding or brazing for any purpose is prohibited.

§ 178.37(f) Wall thickness.

(1) Does not apply.

(2) The minimum wall thickness must be such that the wall stress at the minimum specified test pressure does not exceed 67 percent of the minimum tensile strength of the steel as determined in §§178.37-16 and 178.37-17 of this exemption. A wall stress of more than 90,500 psi is not permitted and in no case may the wall thickness be less than 0.179 inch.

(3) Calculation must be made by the formula:

$$S = P(1.3D^2 + 0.4d^2) / (D^2 - d^2)$$

where:

S = wall stress in pounds per square inch;

P = minimum test pressure of 3/2 of service pressure;

D = outside diameter in inches;

d = inside diameter in inches.

§ 178.37(g) Heat treatment.

* * *

(1) Each cylinder must be heated and held above the upper critical temperature (A_{c3}) for at least one hour per inch of thickness based on the maximum thickness of the cylinder and then quenched in a suitable liquid medium having a cooling rate not in excess of 80 percent of water. The steel temperature on quenching must be above the A_{c3} temperature but not higher than 1700 °F.

(2) After quenching, each cylinder must be reheated to a temperature below the transformation range but not less than 1000 °F, and must be held at this temperature for at least one hour per inch of thickness based on the maximum thickness of the cylinder. Each cylinder must then be air cooled.

§ 178.37(h) *Openings in cylinders and connections (valves, fuse plugs, etc.) for those openings.*

(1) Threads required, to be clean cut, even, without checks, and to gauge. Openings are

AUG 16 2000

permitted in the top head and centerline of the cylinder only.

(2) All openings must be circular and threaded. Straight threads must be used and must conform with the following:

(i) National Gas Straight Thread (NGS) type must conform with the requirements of Federal Standard H-28 (1978), Sections 7 and 9.

(ii) Unified Thread (UN) type must conform with the requirements of Federal Standard H-28 (1978), Section 2.

(iii) Controlled Radius Root Thread (UNJ) type must conform with the requirements of Federal Standard H-28 (1978), Section 4.

(iv) Other straight thread types conforming with other recognized standards may be used provided that the requirements of paragraph (3) below are met.

(3) All straight threads must have at least 6 engaged threads, a tight fit, and a factor of safety in shear of at least 10 at the test pressure of the cylinder. Shear stress must be calculated by using the appropriate thread shear area in accordance with Federal Standard H-28 (1978), Appendix A5, Section 3. Gaskets are required to prevent leakage.

§ 178.37(i) *Hydrostatic test.*

* * *

(1) Applies except that water jacket method only is authorized.

(2) * * *

(3) * * *

(4) Each cylinder must be tested to at least 3/2 times marked service pressure.

AUG 16 2000

§ 178.37(j) *Toughness and ductility tests.*

(1) Flattening Test. Between knife edges, wedge-shaped, 60-degree angle, rounded to $\frac{1}{2}$ inch radius; test one cylinder taken at random out of each lot of 200 or less cylinders.

Longitudinal axis of the cylinder must be at approximately a 90 degree angle to the knife edges.

(2) Impact Tests. For each lot of 200 or less cylinders, three subsize Charpy V-notch specimens must be taken from the lower sidewall of one heat treated test cylinder at approximately evenly spaced (120 degree) intervals and tested at -50 °C in accordance with ASTM E-23.

(3) Flawed Burst Test. For each lot of 200 or less cylinders, one cylinder must be flawed and cycle tested as described in 178.37-8(c)(4) of this exemption.

(4) Hardness examination. A hardness measurement must be performed on the cylindrical section of each cylinder after heat treatment.

§ 178.37(k) *Physical test and magnetic particle examination.*

* * *

(1) * * *

(2) * * *

(i) Specimens must be: Gauge length 8 inches with width not over 1 $\frac{1}{2}$ inches; or gauge length 2 inches with width not over 1 $\frac{1}{2}$ inches. The specimen, exclusive of grip ends, must not be flattened. * * *

(ii), (iii) and (iv) * * *

(3) * * *

(4) Magnetic particle examination. All cylinders must be inspected by the wet magnetic particle method in accordance with ASTM E-709-85 before

AUG 16 2000

Continuation of DOT-E 9791 (6th Rev.)

Page 10

closing in and after heat treatment to detect the presence of quench cracks or other discontinuities.

§ 178.37(1) *Acceptable results of production tests and inspections.*

(1) Impact tests. The Charpy V-notch impact properties for the three specimens for each lot of cylinders must not be less than the values shown below at -50°C:

<u>Size</u> <u>(mm)</u>	<u>Average value</u> <u>for acceptance</u> <u>3 specimens</u>	<u>Minimum value</u> <u>1 specimen only</u> <u>of the three</u>	<u>Lateral</u> <u>expansion</u> <u>inches</u>	<u>Percent</u> <u>fibrous</u> <u>fracture</u>
10x4	12.0 ft.lbs.	10.0 ft.lbs	0.012	50

(2) Flattening Test. Flattening required without cracking to eight times the wall thickness of the tested cylinder. Continue flattening until cracking occurs. Maximum degree of flattening attained without cracking and knife clearance must be entered on the inspector's report.

(3) Flawed Burst Test. The failure must originate in the cylinder sidewall and be by leakage before burst.

(4) Mechanical Tests.

(i) Tensile strength must not exceed 165,000 psi.

(ii) Elongation must be at least 16 percent for gauge length of 2 inches with width not over 1½ inches.

(5) Magnetic Particle Inspection. Any cylinder found to have a quenching crack must be rejected and may not be requalified.

(6) Hardness Measurement. The tensile strength equivalent of the hardness number obtained may not be more than 165,000 psi; (HRC 37(Brinell 342)). When the results of a hardness test exceeds the maximum permitted, two or more retests may be made: however, the hardness number obtained in each retest may not exceed the maximum permitted.

AUG 16 2000

§ 178.37(m) *Leakage test.*

Leakage test is not required.

§ 178.37(n) *Rejected cylinders from production testing.*

- (1) Reheat treatment of cylinders rejected by the impact test is authorized; subsequent thereto, acceptable cylinders must pass all prescribed tests.
- (2) Reheat treatment of cylinders rejected by the flattening test is authorized; subsequent thereto, acceptable cylinders must pass all prescribed tests.
- (3) Reheat treatment of cylinders rejected by the flawed burst test is authorized; subsequent thereto, acceptable cylinders must pass all prescribed tests.
- (4) Reheat treatment of cylinders rejected by the mechanical properties test is authorized; subsequent thereto, acceptable cylinders must pass all prescribed tests.
- (5) Cylinders rejected by the magnetic particle examination (wherein the defects are not quench cracks) may be reheat treated, subsequent thereto, acceptable cylinders must pass all prescribed tests.
- (6) Reheat treatment of cylinders rejected by the hardness measurement is authorized; subsequent thereto, acceptable cylinders must pass all prescribed tests.

b. TESTING - Each cylinder must be requalified for use every five years in accordance with 49 CFR 173.34 as prescribed for DOT specification 3AA cylinders except that the minimum retest pressure must be $3/2$ times the service pressure. Cylinders requalified after having been subjected to action of fire must be reported to the OHMEA prior to being placed in service.

AUG 16 2000

8. SPECIAL PROVISIONS:

a. A person who is not a holder of this exemption who receives a package covered by this exemption may reoffer it for transportation provided no modifications or changes are made to the package and it is reoffered for transportation in conformance with this exemption and the HMR.

b. A current copy of this exemption must be maintained at each facility where the package is offered or reoffered for transportation.

c. Prior to the initial shipment of any specific design, a report of prototype test results specified in § 178.37(d)(3) of this exemption must be submitted to the OHMEA. The cylinder manufacturer must retain the test reports required by this exemption for as long as these cylinders are authorized. A copy of the inspector's report for the first three lots produced must be submitted to the OHMEA as soon as practicable.

d. These cylinders must not be used for carriage of any gas that would cause hydrogen embrittlement of the steel.

e. Filling limits specified in § 173.302(c) are not authorized. Under no circumstance are these cylinders to be filled to a pressure exceeding the marked service pressure at 70°F.

9. MODES OF TRANSPORTATION AUTHORIZED: Motor vehicle, cargo aircraft only.

10. MODAL REQUIREMENTS: A current copy of this exemption must be carried aboard each aircraft used to transport packages covered by this exemption. The shipper must furnish a copy of this exemption to the air carrier before or at the time the shipment is tendered.

11. COMPLIANCE: Failure by a person to comply with any of the following may result in suspension or revocation of this exemption and penalties prescribed by the Federal hazardous materials transportation law, 49 U.S.C. 5101 et seq:

- o All terms and conditions prescribed in this exemption and the Hazardous Materials Regulations, 49 CFR Parts 171-180.

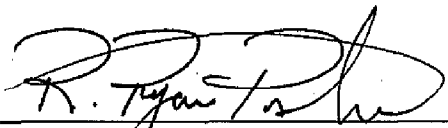

- o Registration required by § 107.601 et seq., when applicable.

Each "Hazmat employee", as defined in § 171.8, who performs a function subject to this exemption must receive training on the requirements and conditions of this exemption in addition to the training required by §§ 172.700 through 172.704.

No person may use or apply this exemption, including display of its number, when this exemption has expired or is otherwise no longer in effect.

12. REPORTING REQUIREMENTS: The carrier is required to report any incident involving loss of packaging contents or packaging failure to the Associate Administrator for Hazardous Materials Safety (AAHMS) as soon as practicable. (Sections 171.15 and 171.16 apply to any activity undertaken under the authority of this exemption.) In addition, the holder(s) of this exemption must inform the AAHMS, in writing, of any incident involving the package and shipments made under the terms of this exemption.

Issued in Washington, D.C.:

For Robert A. McGuire
Associate Administrator for
Hazardous Materials Safety
